How much power does a home battery have?

Some batteries offer just 3-5 kW of power, enough for lights, a fridge, and a few other essentials. Quality home battery systems are modular, which means that you can scale both energy storage capacity and output power based on your needs.

Should you put battery storage in your home?

In short, battery storage in your home can bring the following benefits: Let's say your home has solar panels on the roof or even a wind turbine in the back garden. Without battery storage, a lot of the energy you generate will go to waste.

What makes a good home battery system?

Quality home battery systems are modular, which means that you can scale both energy storage capacity and output power based on your needs. If your goal is to cover 5 kWh of most critical loads per day for 2 days of backup autonomy, without any recharge from solar:

Can domestic battery storage be used without renewables?

Short answer: yes. Domestic battery storage without renewables can still benefit you and the grid. This is especially true for those on smart tariffs; charge your battery during cheaper off-peak hours and discharge during more expensive peak hours, cutting your bills and reducing strain on the grid during peak energy use times.

How much energy does your home use a day?

Summer air-conditioning or pool pumps push usage sharply higher, while winter electric heating can do the same. It is common for peak-season consumption to exceed your spring or fall baseline. According to the U.S. Energy Information Administration, the median American home used about 10,500 kWh in 2023, approximately 29 kWh per day<sup>1</sup>.

Can a battery back up a home?

Because batteries don't have enough power output to back up your entire home at once, most storage installations include a critical load panel and a secondary electrical panel with fewer circuits that a battery can power during an outage.
